

*Validated. Reliable. Family-Centered*

# HomeGoals™ Research Summary

Validated, culturally responsive  
approach to early intervention tool  
design

## Why it Matters

Family-centered care is key to effective early intervention, yet professionals often struggle to apply it—especially with multicultural, multilingual families. Gaps remain due to a lack of validated, user-friendly tools capturing both professional and parent perspectives. The HomeGoals™ Program fills this need with three culturally responsive tools: a developmental screener, milestone checklist, and parent survey. Validated through expert review and high interrater agreement, these tools assess parent stress, knowledge, and involvement to support equitable, practical early intervention. With strong content validity and reliability, HomeGoals™ bridges theory and practice, empowering providers and families from identification to discharge.

## What This Means

- ✓ **Reliable Screening**  
Track developmental & language concerns with confidence.
- ✓ **Parent-Centered Insights**  
Capture caregiver knowledge, stress, and involvement. Culturally Responsive
- ✓ **Designed with diverse families in mind, adaptable across settings.**

## Validation Results

Where

### SCREENER

- I-CVI = .83–1.00
- S-CVI = .89
- Kappa = .87

### PARENT SURVEY

- I-CVI = .83–1.00
- S-CVI = 1.00
- Kappa = .90

### MILESTONE CHECKLIST

- I-CVI = .83–1.00
- S-CVI = 1.00
- Kappa = .93
